Prof. Joshua Lederberg, Ph.D.
Stanford University
Stanford, California
Department of Genetics
School of Medicine.

Dear Dr. Lederberg:

Thank you for your letter dated
the 11th of September.

In mine of July 13th I was not
perhaps clear enough.

The purpose of my work is to
transfer the antigen H i of S. typhimurium to
S. enteritidis, using as vehicle the bacteriophage
of S. typhimurium. The existence of a new form
S. enteritidis 1,1X,X11, i, should be detected with
serological methods.

So far, I am in the first part
of my work; I mean trying to isolate the bacterio-
phage. I spoke of in my former letter about that
and the point 5 refers to the test of bacteriophage
in Petri dish, and there is where I do not succeed
since I have not been able to get the phage.

I hope you kindly let me know
any suggestion about this.

Yours sincerely,

Barbara Holcman de Spector
